PROFESSIONAL SUMMARY

Results-driven Software Developer with **3.7** years of experience specializing in **Blazor**, **ASP.NET Core MVC**, **C#**, and enterprise application development. Proven expertise in building high-performance, reusable UI components including Spreadsheet, Data Grid, Dashboard, and Gantt Chart solutions. Experienced in **AI-powered** product development, LLM integrations, prompt engineering, REST API integration, microservices consumption, performance optimization, and Agile delivery. Recognized for mentoring junior developers and driving innovative product enhancements.

CORE TECHNICAL SKILLS

Frontend	Blazor, JavaScript, TypeScript, HTML, CSS, Bootstrap
Backend	C#, ASP.NET Core MVC, .NET Core
Testing	NUnit, Playwright
AI/LLM	Prompt Engineering, AI Agents, LLM Integration
Tools	Git, Visual Studio, Agile Scrum

PROFESSIONAL EXPERIENCE

Software Developer | Syncfusion | Sep 2022 – May 2026

- Developed and maintained enterprise-grade web components using **Blazor** and **ASP.NET Core MVC**.
- Contributed to **REST API** and **Web API** integration for component communication, ensuring smooth interoperability across services.
- Designed scalable and reusable UI components for Spreadsheet, Grid, Dashboard, and Gantt Chart modules.
- Implemented virtualization, filtering, sorting, grouping, and high-volume data rendering capabilities.
- Integrated **AI-powered** spreadsheet functionality using Large Language Models (LLMs).
- Implemented **Entity Framework** with Microsoft SQL Server for efficient database interactions, supporting CRUD operations and optimizing data workflows.
- Built **AI agents** for automated bug analysis and code-fix recommendations.
- Utilized **LINQ** extensively for data processing and business logic implementation.
- Performed performance optimization, debugging, and critical issue resolution.
- Created and maintained **NUnit** test cases to reduce regression issues.
- Participated in **Agile** ceremonies, sprint planning, estimation, and code reviews.
- Mentored junior developers and promoted development best practices across teams.
- Spearheaded the optimization of the Syncfusion Gantt Chart component for **Blazor ASP.NET**, resolving key performance bottlenecks and improving user experience by 25%.

Key Impact:

- Improved component usability and performance through architecture and rendering optimizations.
- Reduced debugging effort through AI-assisted workflows.
- Enhanced product quality through testing and code review practices.

KEY PROJECTS

1. Enterprise Spreadsheet Component

Domain: *Healthcare*

Technologies: *Blazor, ASP.NET Core MVC, C#, LINQ, AI Integration, REST APIs, Clean Architecture*

- Developed advanced spreadsheet features including data manipulation, formula execution, undo/redo functionality, and natural language interactions.
- Integrated **AI** capabilities enabling prompt-driven spreadsheet operations.

Roles & Responsibilities:

- Implemented undo/redo functionality using Data Structures (stack-based approach) for reliable user control.
- Designed sorting and data manipulation features, ensuring performance by shifting from a div-based rendering approach to a table-based architecture.
- Utilized **LINQ** with generic list collections to streamline data querying and manipulation, improving code readability and maintainability
- Created custom **AI** agents for data validation workflows, integrating prompt-driven operations into the spreadsheet.
- Applied Clean Architecture and **SOLID** principles to maintain scalability and separation of concerns.
- Developed **REST API** endpoints for seamless communication with microservices and external systems.
- Built Playwright and **NUnit** automation test suites, achieving complete code coverage for the component.
- Mentored junior engineers, guiding them on **Blazor** best practices, debugging, and performance optimization.
- Implemented virtualization techniques to handle large datasets efficiently.
- Resolved customer-reported issues and delivered requested features, ensuring client satisfaction and product stability.

2. Enterprise Data Grid

Domain: *Enterprise*

Technologies: *Blazor, C#, Microservices*

- Developed enterprise-scale **Blazor** data grid features including virtualization, sorting, filtering, and grouping.
- Optimized rendering performance for large datasets.

Roles & Responsibilities:

- Developed enterprise-scale grid features including virtualization, sorting, filtering, and grouping.
- Optimized rendering performance for large datasets across multiple environments.
- Collaborated on microservice-based backend integration, enabling distributed data handling.
- Resolved customer-reported bugs, including virtualization issues and UI inconsistencies.
- Delivered UI fixes across five different themes, ensuring consistent user experience.

3. Enterprise Gantt Chart

Domain: *Enterprise*

Technologies: *Blazor, ASP.NET Core MVC*

- Improved rendering efficiency and user interaction for large scheduling datasets.
- Resolved performance bottlenecks and enhanced responsiveness in **Bazor** Framework.

Roles & Responsibilities:

- Improved rendering efficiency and user interaction for large scheduling datasets.
- Resolved performance bottlenecks and enhanced responsiveness for enterprise-scale usage.
- Designed modular components aligned with Clean Architecture principles to support extensibility.
- Handled customer issues and bug resolution, ensuring stability and reliability of the component.

AI Bug Resolution Agent

Technologies: *AI Agents, Prompt Engineering, LLM Integration*

- Designed workflows for automated issue analysis and bug-fix recommendations.
- Accelerated debugging and engineering productivity.

Roles & Responsibilities:

- Created and deployed custom AI agents to automate bug-fixing workflows.
- Drafted feature implementation specifications for automated issue analysis and resolution.
- Designed intelligent pipelines for bug detection and fix recommendations, accelerating debugging cycles.
- Integrated LLM-driven insights into engineering workflows to improve accuracy and speed.
- Applied **Clean Architecture** principles to separate **AI** logic from application layers, ensuring maintainability.
- Enhanced engineering productivity by reducing manual debugging time and streamlining bug resolution.

| ACHIEVEMENTS

- Internal Technical Mentor (2024–2026): Guided junior developers in Blazor and ASP.NET Core MVC best practices.
- Conducted code reviews and debugging sessions to improve team productivity.
- Applied **prompt engineering** techniques to accelerate documentation, debugging, and feature development.
- Recognized internally for AI-enabled product innovation and performance optimization contributions.

| EDUCATION

- Bachelor of Engineering (Electronics & Communication Engineering)
- Ramco Institute of Technology | 2019 – 2022
- CGPA: 7.1/10
